After a Busy 2018, the Foundation Looks Forward to 2019

In 2018, the Foundation undertook an aggressive agenda by conducting three requests for proposals (RFP). In the spring, the Foundation issued a mini-RFP to fill the data gaps in response to the Food Safety and Inspection Service’s revised Appendices A and B, issued in June 2017.

The revised Appendices A and B provide safe harbor guidelines for ready-to-eat (RTE) meat and poultry processors. Appendix A was designed to help meat and poultry processors meet lethality requirements in RTE products and Appendix B was designed to assist processors in meeting the cooling and stabilization requirements for heat-treated RTE and non-RTE products.

In July, the Foundation Board of Directors approved three research projects to address these priorities:

- Effects of Product Moisture and Process Humidity on Pathogen Lethality during Continuous Cooking of Meat and Poultry Products, Michigan State University
- Development and Validation of Dynamic Predictive Models for Growth and Toxin Formation by Staphylococcus aureus in Low Temperature Cooked Products, University of Georgia
- Validating growth models for Clostridium perfringens, Clostridium botulinum, and Bacillus cereus during cooling of uncured meat and poultry products, University of Wisconsin

Signifying the importance of this research, these projects are jointly funded by the Beef Checkoff, Beef Industry Food Safety Council and the U.S. Poultry and Egg Association.

In August, the Foundation issued its annual RFP on key topics in food safety and, for the first time, included nutritional sciences and product quality in its request. During this two-step process, where selected pre-proposals are fully developed for review by the Foundation’s Research Advisory Committee, the U.S. Departments of Agriculture and Health and Human Services released the topics and scientific questions to be addressed by the 2020 Dietary Guidelines Advisory Committee. A supplemental RFP was subsequently issued to address relevant questions on the role of meat and poultry products in healthy dietary patterns. The proposals submitted in response to the supplemental RFP were reviewed by the Foundation’s Research Advisory Committee and NAMI Health and Wellness Advisory Committee alongside the proposals in response to the annual RFP. Several projects were recommended for funding and will be evaluated by the Foundation’s Board of Directors in January 2019.

Foundation to Sponsor Consumer Food Safety Education Conference

The Foundation, through its contract with the Beef Checkoff, will sponsor the Consumer Food Safety Education Conference March 6-8, 2019, in Orlando, FL. At this seventh in a series of food safety education conferences organized by the non-profit Partnership for Food Safety Education, attendees will explore influences on consumers, ways to affect behavior change and ways forward to better engage everyone in modeling proper food preparation and hand-hygiene practices. The Foundation will share beef safety resources during exhibit hours.

The 2019 conference is expected to draw 400 public and private sector professionals who are involved in educating people about food safety. Additional information on the conference is available at https://cfsec2019.fightbac.org/.
Recent Foundation Research Findings

Reducing *Salmonella* serotypes on Chicken Carcasses by Sodium Bisulfate (SBS) and Investigation into its Reuse to Reduce Water Consumption, University of Arkansas

This project tackled two issues associated with food safety and the poultry industry, namely the need for alternative acidifiers for poultry carcass treatment and the ability to generate safe poultry processing re-use water. To test the use of SBS as a sanitizer for chicken meat, investigators applied SBS at different concentrations and tested it against *S. Enteritidis*-inoculated drum sticks. Drumsticks were selected over carcasses because of industry feedback indicating greater interest in parts rather than carcasses for assessment of alternative sanitizers. This approach also allowed investigators to more easily expand the number of treatments compared within a specific trial. Research demonstrated that three percent SBS reduced *S. Enteritidis* over three days of storage and did not alter appearance of drumsticks after soaking.

The re-use of water by poultry plants is increasingly important given the cost associated with the production of potable water and environmental concerns in arid regions. Therefore, it is essential to develop cost-effective strategies to better utilize re-use water and decrease the bacterial load prior to re-use. Research demonstrated in this project that SBS was very effective in dramatically decreasing *Salmonella* Typhimurium inoculated into commercial re-use water and therefore could be used as an antimicrobial when recycling poultry processing water for reuse in processing.

Validation of lethality and stabilization processes for products with slow come up time: bacon and bone-in ham, Iowa State University, University of Wisconsin, HansonTech

Research determined the effect of slow come-up time and slow stabilization during the thermal processing of bacon and bone-in ham on the survival of *Clostridium perfringens*, *Staphylococcus aureus*, *Listeria monocytogenes* and *Salmonella* spp.

Ten cured-ham treatments were formulated to represent ranges of 55-75% moisture, pH 5.8-6.4, and 1.5-3.0% salt using a full factorial design. Raw treatments were inoculated with 3-log CFU/g *Listeria monocytogenes*, *Staphylococcus aureus*, *Salmonella* spp., or *Clostridium perfringens* spores and vacuum packaged. Samples were heated according to Appendix A (in 6 hours) or slow-cook (in 10 hours), and then continued heating until internal temperature of 70°C. Samples were slow cooled from 54 to 4°C in 25 hours (extended from Appendix B). Duplicate samples per treatment were assayed at 0-time and at internal temperatures 32, 54, 70, 54, 29, and 4°C by enumerating on appropriate selective agars.

All treatments inoculated with *L. monocytogenes*, *S. aureus*, *Salmonella* spp. or *C. perfringens* inhibited growth during control and slow cook. All three vegetative pathogens were inactivated by cooking to 70°C. No difference in survival was observed between Appendix A and slow-cook treatments. In contrast, *C. perfringens* increased 4.7, 3.0, and 1.7 log during the 25-h extended cooling in 75% moisture treatments with pH 6.4/1.5% NaCl, pH 6.4/3.0% NaCl and pH 5.8/1.5% NaCl, respectively. In addition, 55% moisture ham with pH 6.4 and 6.1 and low salt supported a >1.5 log increase. None of the other treatments supported growth during the 25-h extended cool.

This study confirms the critical nature of salt, pH and moisture for pathogen inhibition in cured meat during extended dwell times.

Foundation Education Programs Schedule of Events

Worker Safety Conference for the Meat and Poultry Industry
*Co-located at the International Production and Processing Expo (IPPE)*
Atlanta, Georgia
February 11-12, 2019

Environmental Conference for the Meat and Poultry Industry
*Co-located at the International Production and Processing Expo (IPPE)*
Atlanta, Georgia
February 11-12, 2019

*For more information on these and other programs, please visit the events page at www.meatinstitute.org.*
The Foundation for Meat and Poultry Research and Education is governed by a Board of Directors, which provides scientific leadership and financial oversight, and acts upon recommendations from the Foundation’s Research Advisory Committee. The North American Meat Institute’s Executive Board members are afforded the opportunity to serve on the Foundation’s Board of Directors or appoint a designee to serve on his or her behalf. In an effort to broaden the scope of influence and direction, representatives from the livestock (beef, pork, poultry and egg), retail, academic, government agency and consumer sectors, among others, are invited to serve on the Board of Directors. Terms are for one year. The 2019 Board of Directors are:

Kevin Addesso, Johnsonville Sausage, LLC  
Al Almanza, JBS USA  
Tim Arndt, Jacks Links  
Van Ayvazian, Boar’s Head Provisions Co. Inc.  
Peter Bozzo, Michael’s Finer Meats and Seafoods  
Terry Coffey, Smithfield Foods, Inc.  
Brian Coelho, Central Valley Meat Co.  
Jeff Cromer, AB Foods, LLC  
Martin Eckmann, Alaska Sausage  
Eric Gustafson, Coast Packing Company  
Randy Huffman, Maple Leaf Foods, Inc.  
Neal Leonard, Surlean Foods  
Carlos Lopez, Bar-S Foods  
Joe Maas, JTM Food Group  
Shane MacKenzie, Superior Farms  
Gary Malenke, Perdue Premium Meat Co.  
Steven Maxey, Certified Meat Products  
Dave Miniat, Minit Holdings  
Kathleen O'Donnell-Cahill, Wegmans Food Markets, Inc.  
Ken Petersen, OSI Group, LLC  
Dave Pyburn, National Pork Board  
Ed Sanchez, Lopez Foods  
Suzanne Strassburger, Strassburger Steaks  
Mark Swanson, Birko Corporation  
Hilary Thesmar, Food Marketing Institute  
Mike Townsley, Bob Evans Farms, Inc.  
Steve Van Lannen, American Foods Group  
Dennis Vignieri, Kenosha Beef International, Ltd.  
Noel White, Tyson Foods  
Russ Yearwood, Indiana Packers Corporation

Foundation Contributors
The Foundation is supported through the generous contributions of Meat Institute members and individuals. The 2019 contributors are:

A to Z Portion Control Meats, Inc.  
Agri Beef Co.  
Allen Brothers  
American Foods Group  
Bar-S Foods  
Beef Products Inc.  
Boar’s Head Provisions Co., Inc.  
Bob Evans Farms  
Broadleaf USA Inc.  
Brown Packing Co., Inc.  
Brush Meat Processors  
Catelli Brothers, Inc.  
Caviness Packing  
Central Valley Meat Co., Inc.  
Certified Meat Products  
Clemens Food Group  
Coast Packing  
Consumers Packing Co.  
Evergood Sausage Company  
FPL Food, LLC  
Glier’s Meats, Inc.  
Greater Omaha Packing Co. Inc.  
Harris Ranch Beef  
Hormel Foods Corporation  
Indiana Packers Corporation  
Interbay Food Company  
Jones Dairy Farm  
JTM Provisions  
Kenosha Beef International  
Kessler’s Inc.  
Keystone Foods  
Koegel Meats  
Lopez Foods  
Los Banos Abattoir  
Maple Leaf Foods Inc.  
Meats by Linz  
National Beef Packing Co.  
North Country Smokehouse  
OSI Industries, LLC  
P.G. Molinari & Sons, Inc.  
Premium Iowa Pork LLC  
ProPortion Foods LLC  
Quality Processing Services  
Salm Partners  
Smith Provision Co. Inc.  
Sonoma County Meat Co.  
Strassburger Meats, LLC  
Straw Brand, Inc.  
Superior Farms  
Surlean Foods  
The Taylor Provisions Co.  
Costco Wholesale  
Uncle Charley’s Sausage  
Unibright Foods  
VPP Group LLC  
Wasatch Meats Inc.  
Yosemite Meat Co. Inc.

As of January 15
Current Research Projects

Effects of Product Moisture and Process Humidity on Pathogen Lethality during Continuous Cooking of Meat and Poultry Products, Michigan State University
The overall goal of the project is to provide supporting scientific evidence to document compliance with Appendix A, particularly with respect to the impact of process humidity on *Salmonella* lethality in high-temperature, short-time cooking processes. Research will be conducted using beef patties; restructured chicken patties; breaded, chicken nuggets; whole-muscle chicken breasts; and whole-muscle steak strips.

*Research funded in part by the Beef Checkoff, Beef Industry Food Safety Council and the U.S. Poultry and Egg Association.*

Development and Validation of Dynamic Predictive Models for Growth and Toxin Formation by *Staphylococcus aureus* in Low Temperature Cooked Products, University of Georgia
The overall project goal is to develop and validate predictive models for growth and toxin formation of *Staphylococcus aureus* in un cured roast beef, bacon and hams.

*Research funded in part by the Beef Checkoff and Beef Industry Food Safety Council.*

Validating growth models for *Clostridium perfringens*, *Clostridium botulinum*, and *Bacillus cereus* during cooling of uncured meat and poultry products, University of Wisconsin
This project will develop data to determine the validity of the revised Option 2 cooling guidelines for uncured meat products, specifically to determine if Phase 1 cooling (from 120 to 80°F) can be extended from the currently outlined 1 hour limit. An uncured turkey breast meat will be used in the model.

*Research funded in part by the Beef Checkoff, Beef Industry Food Safety Council and the U.S. Poultry and Egg Association.*

Pathogen growth in alternatively cured ham and bacon during cooking, cooling, and process deviations, Iowa State University and Smithfield Foods
The overall goal of the project is to determine the inhibitory effect of nitrite from a natural source (i.e., pre-converted celery juice powder) in processed meat products with a natural label during “real world” cooking and chilling procedures, which often include instances of process deviation, as well as non-continuous cooling.

Maintenance for Literature Review: Efficacy of Interventions on Pathogens in Processed Meats and Poultry Products, University of Wisconsin
This project will update and expand the version 1 of the tabular summary of references describing antimicrobial interventions that have been tested in processed meat and poultry products. The key project objective is to provide small and very small establishments with an accessible, searchable, user-friendly tool to help them identify interventions and suitable scientific support to meet HACCP system validation requirements. *Funded in part by the Beef Checkoff.*

Intervention Validation: A Review — Continued Maintenance, Texas A&M University
This project will review newly identified and/or published literature that encompass multiple commercially applicable intervention strategies against biological hazards of concern for fresh meat and poultry.

*Funded in part by the Beef Checkoff.*

Tests of *Salmonella* sub-unit proteins as vaccines for broiler chickens, USDA-ARS U.S. National Poultry Research Center
This project will identify the *Salmonella* protein antigens that are able to induce humoral immune response in broilers, and consequently these antibodies can prevent *Salmonella* colonization in the broiler gastrointestinal tracts.

Validation of post-harvest antimicrobial interventions to control *Salmonella* on market hog carcass surfaces and pork products, Kansas State University
This study will validate the efficacy of lactic acid, sulfuric acid sodium sulfate, bromine, 180°F water, and peracetic acid as post-harvest interventions against *Salmonella*, as well as the impact on product color attributes, on pork carcasses and trim.

Research Priority Setting Meeting for Certain By-Products
There is limited research on the impact of rendering on foodborne pathogens, particularly with the implementation of the Food Safety Modernization Act. The Foundation will work with allied stakeholders in the rendering, pet food and cosmetic industries throughout North America to assemble a meeting where industry standards can be discussed to better inform future research priorities and projects. There is a dearth of critical parameters for this type of research.
Research to Determine Susceptibility of *Salmonella* to Antimicrobials Published

Research funded in part by the Foundation was recently published in PLOS ONE. The abstract follows:

Poultry and meat products contaminated with *Salmonella enterica* are a major cause of foodborne illness in the United States. The food industries use a wide variety of antimicrobial interventions to reduce bacterial contamination. However, little is known about *Salmonella* susceptibility to these compounds and some studies have shown a concerning link between biocide resistance and antibiotic resistance. To investigate this, a 96 well panel of 17 common household and commercially used biocides was designed to determine the minimum inhibitory concentrations (MIC) of these compounds for *Salmonella*. The panel contained two-fold serial dilutions of chemicals including Dodecyltrimethylammonium chloride (DC), Benzalkonium chloride (BKC), Cetylpyridinium chloride (CPC), Hexadecyltrimethylammonium bromide (HB), Hexadecyltrimethylammonium chloride (HC), Acetic acid (AA), Lactic acid (LA), Citric acid (CA), Peroxyacetic acid (PXA), Acidified sodium chlorite (ASC), Sodium hypochlorite (SHB), 1,3 dibromo, 5,5 dimethylhydantoin (DBH), Chlorhexidine (CHX), Sodium metasilicate (SM), Trisodium phosphate (TSP), Arsenite (ARI), and Arsenate (ARA). The assay was used to test the susceptibility of 88 multidrug resistant (MDR) *Salmonella* isolates from animal sources. Bacteria are defined as multidrug resistant (MDR) if it exhibited non-susceptibility to at least one agent in three or more antimicrobial categories. The concentration of biocide at which ≥50% of the isolates could not grow was designated as the minimum inhibitory concentration or MIC\(_{50}\) and was used as the breakpoint in this study. The MIC\(_{50}\) (μg ml\(^{-1}\)) for the tested MDR *Salmonella* was 256 for DC, 40 for BKC, 80 for CPC, HB and HC, 1,640 for AA, 5664 for LA, 3,156 for CA, 880 for PXA, 320 for ASC, 3.0 for CHX, 1,248 for DBH, 3,152 (6%) for SHB, 60,320 for SM, 37,712 for TSP, 56 for ARI and 832 for ARA. A few isolates were not susceptible at the MIC\(_{50}\) breakpoint to some chemicals indicating possible resistance. Isolates with MIC\(_{50}\)s of two 2-fold dilutions above the MIC\(_{50}\) were considered resistant. Biocides for which resistant isolates were detected included CPC (n = 1 isolate), HB (1), CA (18), ASC (7), CHX (22), ARA (16), and ARI (4). There was no correlation detected between the biocide susceptibility of *Salmonella* isolates and antibiotic resistance. This assay can determine the MICs of bacteria to 17 biocides in a single test and will be useful in evaluating the efficacy of biocides and to detect the development of resistance to them.

### Save the Date for the 2019 Beef Industry Safety Summit

The Beef Industry Safety Summit has been established as the premier event that brings industry leaders and safety professionals together from all sectors of the beef industry to focus on strategies to improve beef safety. The 2019 Beef Industry Safety Summit will take place March 5-7 in Kansas City, MO. The meeting promises to deliver the latest research information and access to safety experts. Please “Save the Date” for this event. For more information, visit [www.bifsc.org](http://www.bifsc.org).
